Notes:

- Reduce differential pressure 20% for temps above 250°F (125°C) and 40% for temps above 285°F (140°C)
- Typical stator minor diameter tolerances are +/- 0.015
- Material minimum yield to be discussed at time of order subject to availability
- Negative fit indicates clearance

Performance curves are for reference only. Actual power section performance may vary depending on operating conditions (e.g. chosen rotor/stator interference fit, possible rubber swelling by drilling fluid, rotor and stator wear, actual downhole temperature, actual stator temperature, physical and chemical properties of the drilling fluid, and other factors encountered downhole). The torque may exceed that specified for the connected components. Operating above the recommended limits may result in damage to the power section and connected components which the operator may be liable for. Data subject to change without notice.
